

European Food Technology Exploration

A specialized information service that assists the food industrial development manager to get a complete picture of options offered by the European product and process technology market. This service is carried out by expert food technologists and engineers, with more than 20 years of multinational industrial experience in the field.

This service serves as a powerful tool to address questions such as: How can we manufacture this product? What alternative technologies are there? What other products can we manufacture with our equipment? Who are the suppliers of a specific technology? What are the equipment specifications? Prices? Can the technology be modified to fit our needs?

A core product of FOODLINK FORUM for 10 years. It has been used by our clients in Europe, America, Japan, South Korea and Latin America, to:

- establish alternative processing technologies, equipment specifications, prices, etc.
- benchmark options and suppliers; cost reduction
- finding out the experience of other industries with a particular technology
- get important food application details
- map and contact European suppliers and potential partners
- detailed product/process information for strategic planning
- third party manufacture and co-packing options in Europe
- establish European development facilities & contract-out project work
- technical problem solving for product and process development
- get new patent ideas for new products and processes
